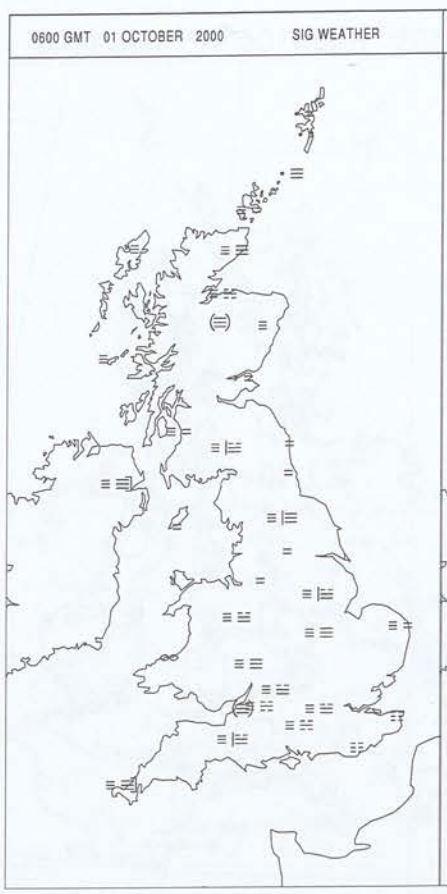
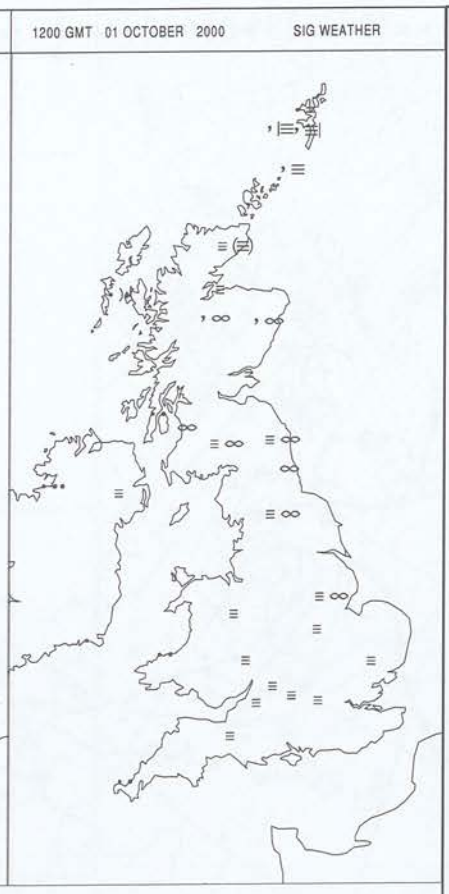
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 01 October 2000.

Showers over parts of north and northeast England gradually decayed through the early hours of Sunday morning so that the country became generally dry, just a little rain and drizzle in Shetland.

With light winds and largely clear skies mist and fog formed widely and became dense in many areas.

The fog thinned steadily during the morning with sunny weather developing across the south and east of the UK. Meanwhile cloud spread into the west during the morning with rain into Northern Ireland and Western Scotland by midday. This rain spread steadily east to lie form mid Scotland to central Southern England around dusk and was heavy at times. Blustery showers followed into the west. The rain moved into East Anglia at the end of the day.

Winds were light and variable overnight, soon becoming fresh to strong southerly as the rain arrived in the west. Winds veered west to northwest behind the rain and strengthened across the southwestern half of the UK with gales in exposed areas.

It was rather warm in the Southeast, elsewhere temperatures were near normal.

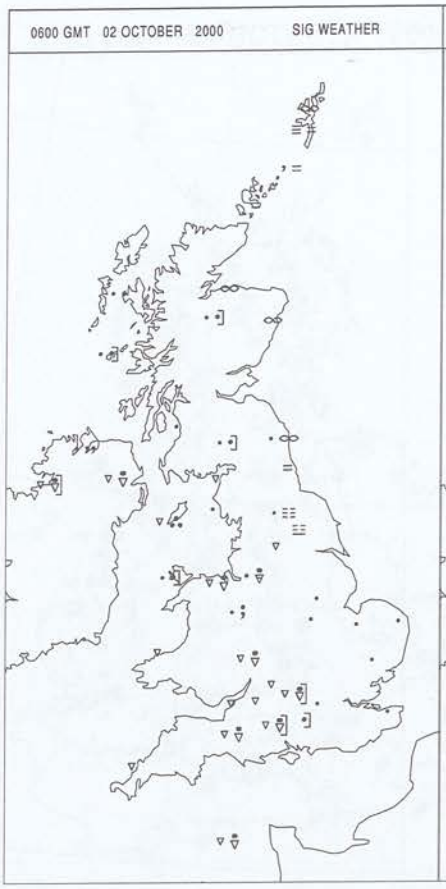
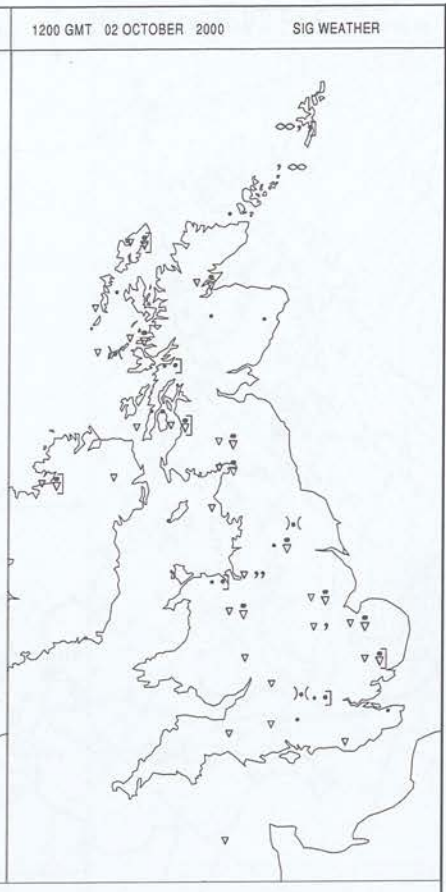
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 02 October 2000.

There were a few showers overnight across Northern Ireland. There was some rain over Scotland and some showers in western parts of England and Wales, especially towards morning. It was mainly dry elsewhere. Aberdaron recorded gusts of 51 knots at 0600 and 0700.

Northern Ireland had a rather cloudy day with a few showers especially in the morning and again in the evening. A few showers continued over the south and west of Scotland, and it was a generally dry and cloudy afternoon in these parts. Eastern Scotland was brighter with sunny periods in most places.

Eastern England, as far south as Norfolk, had long sunny periods for most of the day. Much of England and Wales though had a cloudy morning. There were some showers or light outbreaks of rain mainly in the west and more especially in the morning and late evening. The West Country and parts of the south coast brightened with sunny spells in the afternoon.

Temperatures were close to normal generally but the brightest areas in the east were rather warm.

EXTREMES

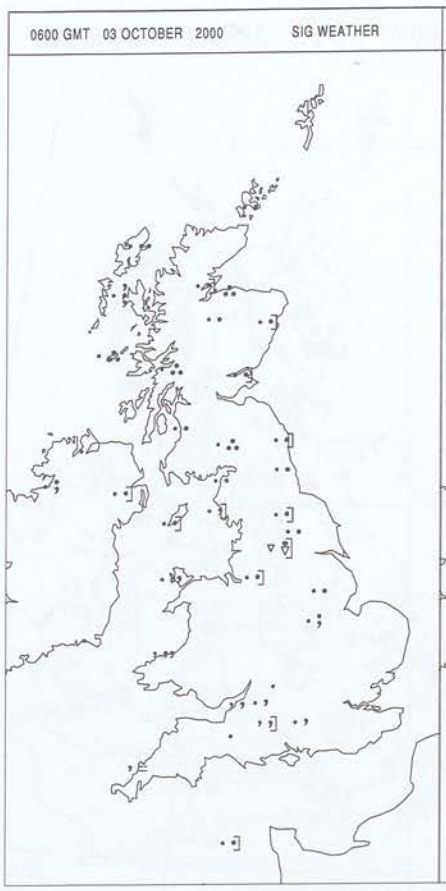
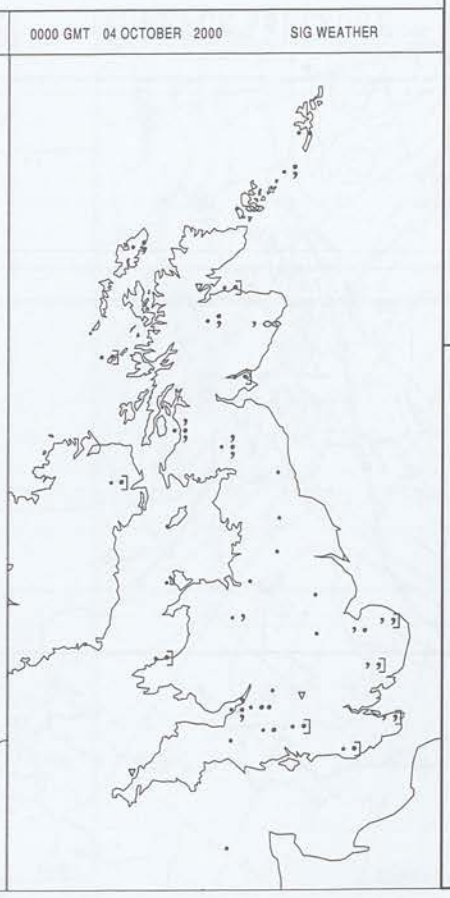
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 03 October 2000.

Eastern areas began Tuesday with fairly clear skies and as a consequence some patchy ground frost in eastern Scotland. Western districts were generally cloudy with outbreaks of rain, heavy in places in the Hebrides. By morning almost all parts of the country had become cloudy with the outbreaks of rain in the west steadily spreading east into central districts.

During the morning some breaks in the cloud occurred in sheltered parts but generally it was rather cloudy with patchy rain or drizzle drifting northeast across England and Wales, whilst rather persistent and somewhat heavier rain affected western parts of Scotland.

Through the afternoon the southerly winds steadily increased in areas close to the Irish Sea and some persistent rain moved into western fringes of Wales and southwest England. By early evening winds were gusting 57 to 60 knots around exposed headlands in the west of Wales but strongest was the 71 knots at Capel Curig.

Temperatures were mostly around average but in places to the northeast of high ground temperatures were warm.

EXTREMES

Highest Maximum:
21.0 Drumburgh, Cumbria
Lowest Maximum:
12.5 Lerwick, Shetland

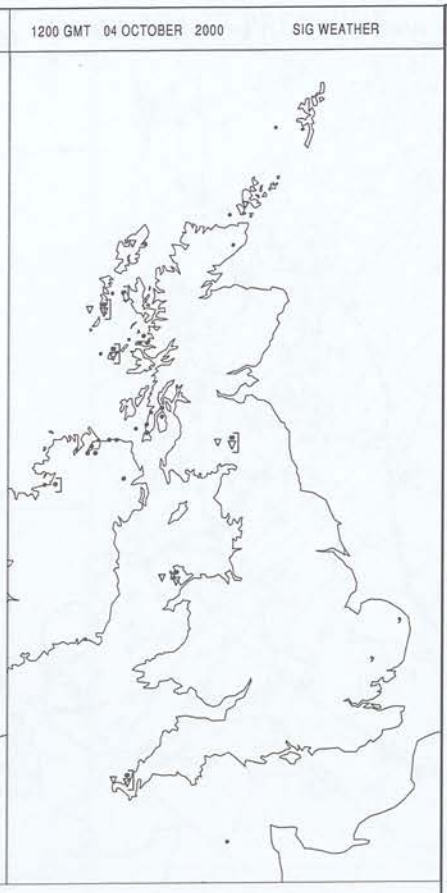
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 04 October 2000.

Wednesday began wet and windy across northwest England and later southwest Scotland with numerous gusts above 40 knots. Further south there was some patchy rain but it was mostly light, whilst remaining parts of Scotland were cloudy with patchy rain. Northern Ireland was largely dry with clear spells and this weather type spread to west Scotland by morning with the patchy rain across southern parts translating northeast to affect mostly Lincolnshire by dawn.

There were, however, a few odd spots of drizzle in East Anglia during the morning but most places were dry with bright or sunny spells developing, particularly in northern England and eastern Scotland. At the same time the next area of cloud and rain was pushing into the west of Scotland and by midday this had reached all of Northern Ireland with a few showers also for western coasts of Wales and the Scottish borders. Through the afternoon the rain area spread across all of Scotland with showers following behind, whilst apart from a few coastal showers elsewhere it was dry but became increasingly cloudy.

Temperatures were mainly within a degree or so of average.

EXTREMES

Highest Maximum:
17.1 Marham, Norfolk
Lowest Maximum:
10.4 Tulloch Bridge, Inverness-Shire

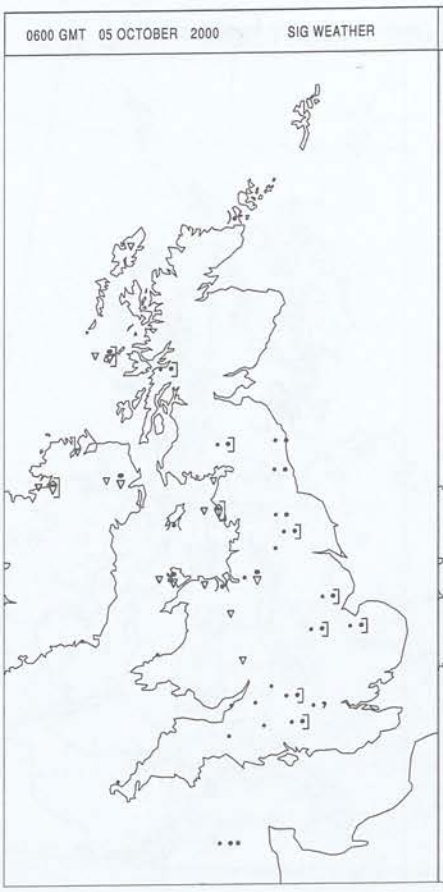
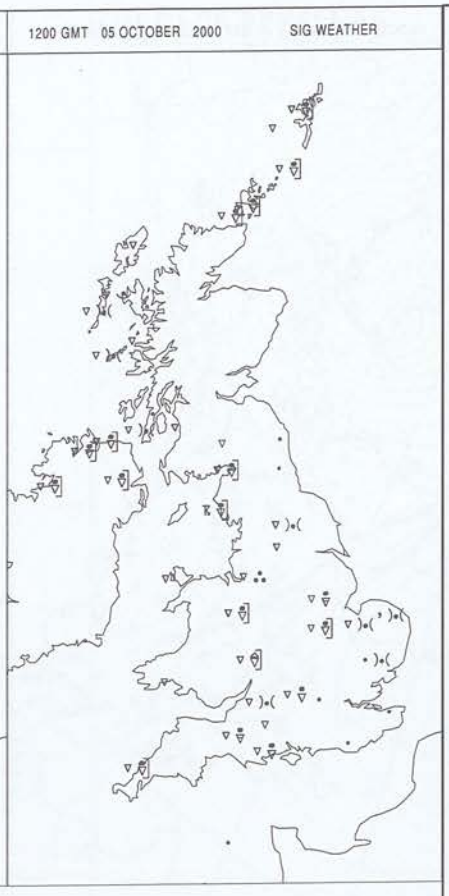
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 05 October 2000.

Overnight, Southern Scotland was wet, while other parts of Scotland found plenty of dry weather, though the Western Isles had showers.

Across much of Scotland, the day brought plenty of sunshine with showers in the west developing across many other parts in the afternoon, although the heavier showers were generally confined to the west. During the evening, shower activity became confined to western and northern coastal areas.

Overnight, Northern Ireland was largely dry. By day, there was sunny periods with showers in many places before it became fine and dry during the evening.

Overnight, much of Northern England and West Wales had rain with some on the heavy side, while the rest of Wales and England also found early rain, though more patchy and mostly light. During the day the whole of England and Wales had sunny periods with showers developing. Some of these showers turned heavy with thunder, especially in more southern and eastern parts of England where reports of mini tornadoes were received. Later in the day, showers became restricted to parts of the Midland, Northwest England and Wales.

Temperature levels countrywide were mostly close to the seasonal normal.

EXTREMES

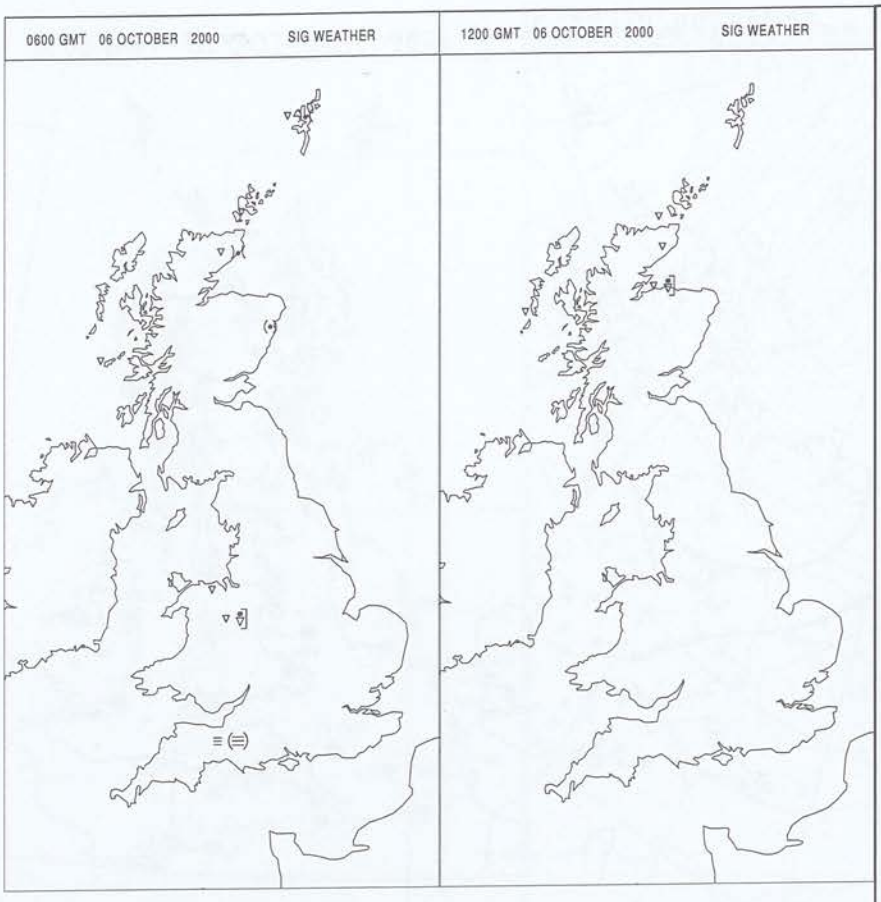
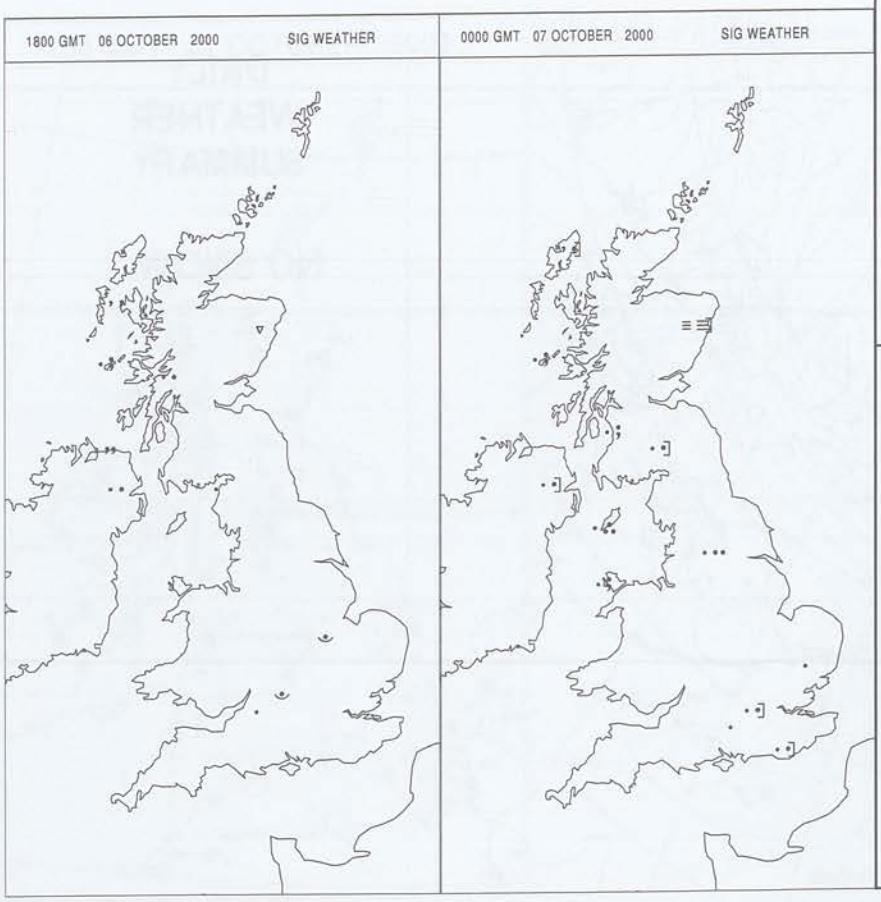
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 06 October 2000.

Overnight there some showers across Cheshire, northeast Wales and also northernmost parts of Scotland. Remaining areas had a dry night with largely clear skies. A number of places experienced a ground frost.

There were further showers over Cheshire during the morning, but these had died away by midday. Many places had a dry and bright day with plenty of sunshine across eastern parts of Scotland and England. Further west, after a bright morning, the skies became increasingly cloudy. Late in the day and during the evening, some patchy light rain affected parts of the Midlands, central southern England, Northern Ireland and westernmost parts of Scotland.

The temperatures were generally close to normal over southwest England, Wales, Northern Ireland and western Scotland. Elsewhere, it was rather cold.

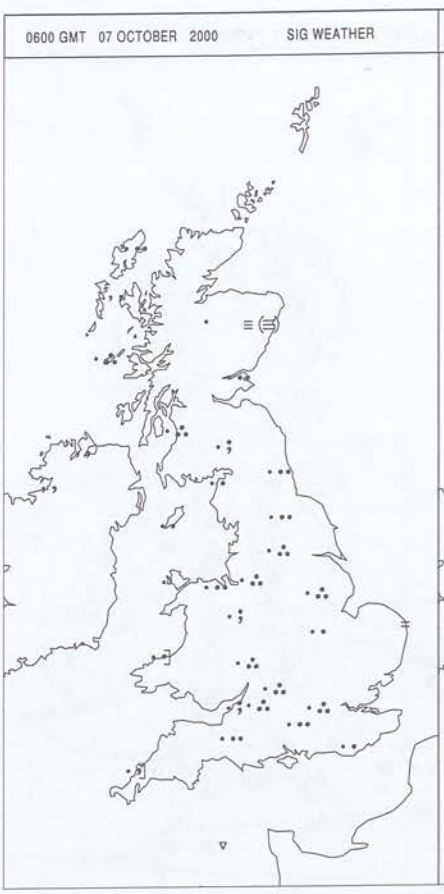
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 07 October 2000.

Eastern Scotland and parts of eastern England had clear periods for a time overnight but most other parts of the United Kingdom were cloudy. There were some outbreaks of rain and drizzle in the west and some of this rain and drizzle spread to eastern parts by morning.

Northern Ireland had a cloudy day with some rain and drizzle. Northeast Scotland had some bright spells for a while in the morning and the Northern Isles stayed were largely dry all day. Rain in western and southern parts of Scotland spread east, with drier weather in the west later with a few showers.

England and Wales had a cloudy day. A band of rain spread east reaching all parts by mid-morning with some heavy rain in places and this only edged slowly eastwards through the day, clearing the east coast in the evening. Wales and southwest England became drier for a time in the afternoon, but had further rain and drizzle later.

Temperatures were close to normal in many places. It was cold or very cold across eastern counties of England.

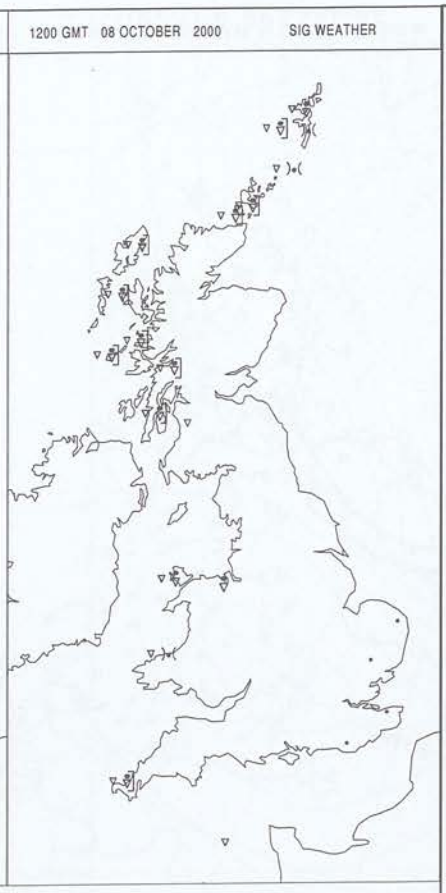
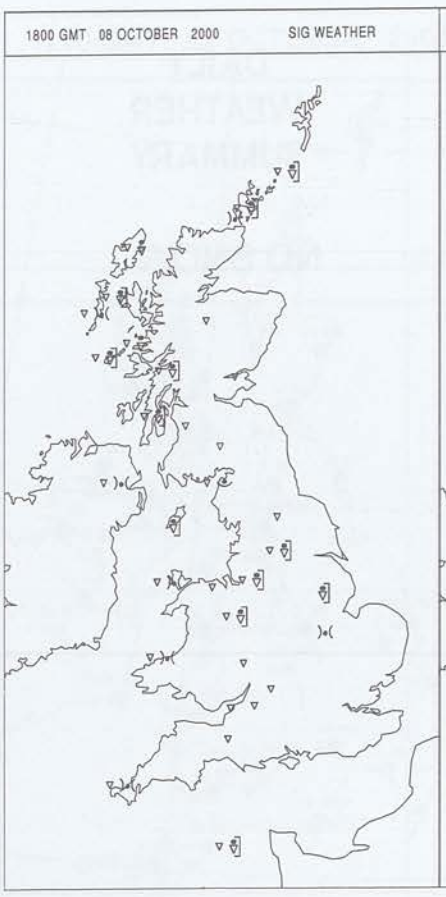
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 08 October 2000.

Northern Ireland had a few showers overnight and there were widespread showers across western parts of Scotland. The northeast of Scotland had some rain at first and the wind gusted to 53 knots at Lerwick around midnight. Eastern and central parts of England had some rain and drizzle overnight, becoming confined to parts of East Anglia, Kent and Sussex by dawn.

Northern Ireland had a bright day with scattered showers. There were further showers over the north and west of Scotland, while the east stayed generally dry and sunny. Kent, Essex and the extreme east of East Anglia had some early rain and then all parts of England and Wales had sunny periods. A few showers developed through the day, but these were mostly light and well scattered. Some showers continued through the evening across western Scotland, Wales and northwest England in particular. Outbreaks of rain spread into parts of south Wales and Cornwall by midnight.

Temperatures were close to normal over Scotland but it locally rather cold elsewhere.

EXTREMES

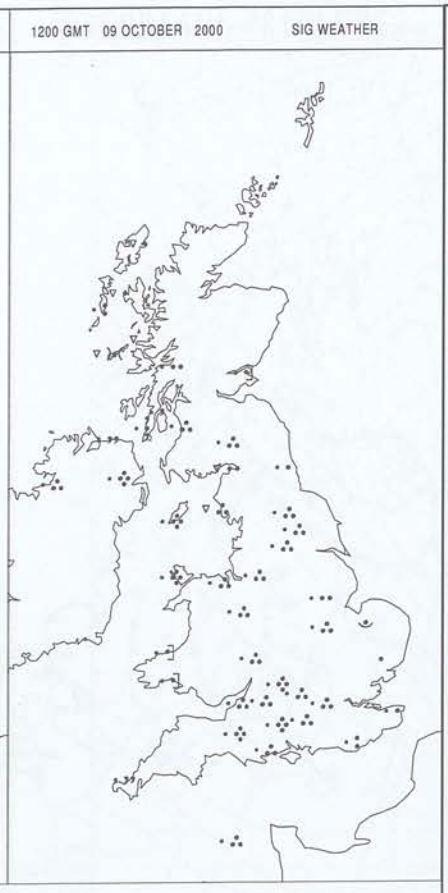
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 9 October 2000.

The night started mostly dry with variable cloud and clear spells, some scattered showers across western areas, but with cloudier skies and rain already into Southwest England and South Wales. By dawn this rain had pushed west into Northern Ireland, Wales and further into western parts of England. To the north and east of here under the clearer skies, temperatures fell low enough for a touch of frost in Scotland and a slight grass frost elsewhere.

During the daytime the rain extended north and east across the whole of the UK, courtesy of a low pressure system whose centre tracked slowly northeast across Ireland and into southern Scotland by evening. The rain was heavy in places and came accompanied with strong southerly winds, with gales along the Welsh and English coasts. By evening the rain had cleared from the Southwest of the UK, with scattered heavy showers instead, some with thunder. Up to 2100 West Freugh had recorded 60.2mm of rain, and the highest gust recorded was 56 knots at Langdon Bay at 1900hrs.

By the end of the evening, the rain band was curling back from East Anglia and Southeast England, across Scotland and back through Northern Ireland, into Northwest England. Elsewhere cloud was more broken with scattered showers, these mainly in the west.

EXTREMES

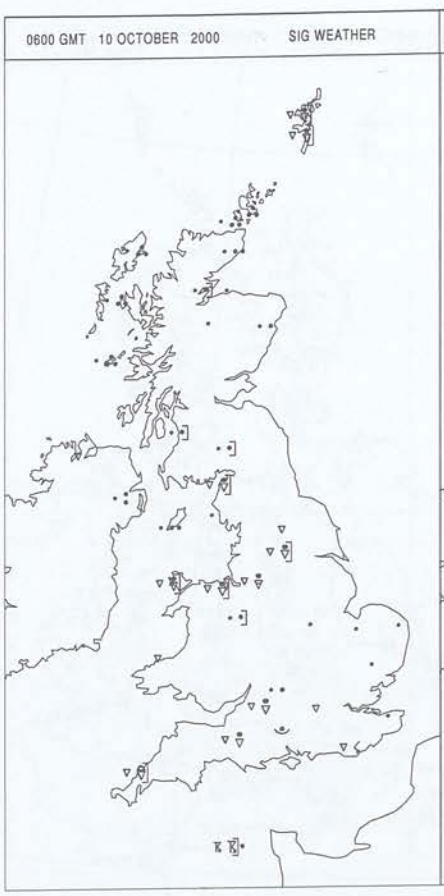
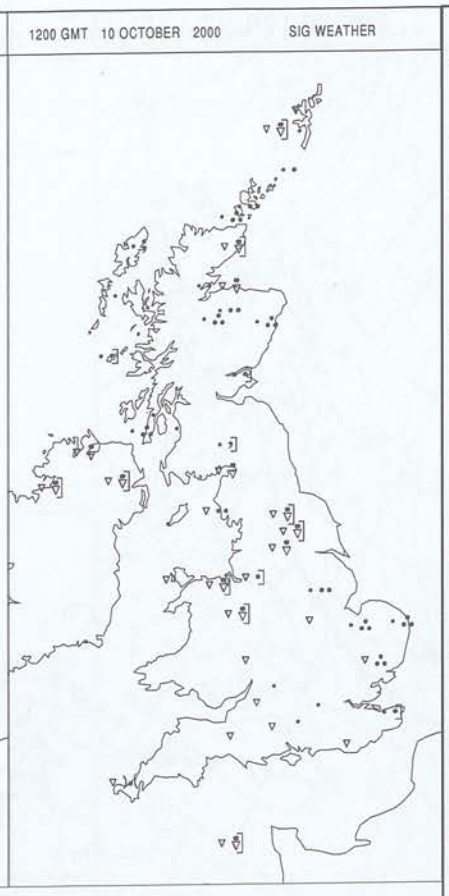
SIGNIFICANT WEATHER





Summary of UK Weather for Tuesday 10 October 2000.

One area of heavy rain cleared form eastern England in the early hours but there was another which persisted in Northern Scotland throughout the night. Some also parts of southwest Scotland and northwest England for a time and there were showers in the southwest and in Northern Ireland.

During the day there was further heavy rain in some places, particularly northern Scotland and southwest Scotland and northwest England. The rain persisted over much of northern Scotland into the evening. That over southwest Scotland and Cumbria petered out during the evening. Elsewhere, there were showers during the day but some parts of the south and east of England stayed largely dry with some sunshine. Later in the afternoon, another area of heavy rain reached southwestern Britain and this spread to most of Wales and the southern half of England through the evening. Showers followed this rain into the southwest later in the evening.

It was a windy day in many areas, especially in the far north and it became windy in southern areas in the evening.

It was rather cool.

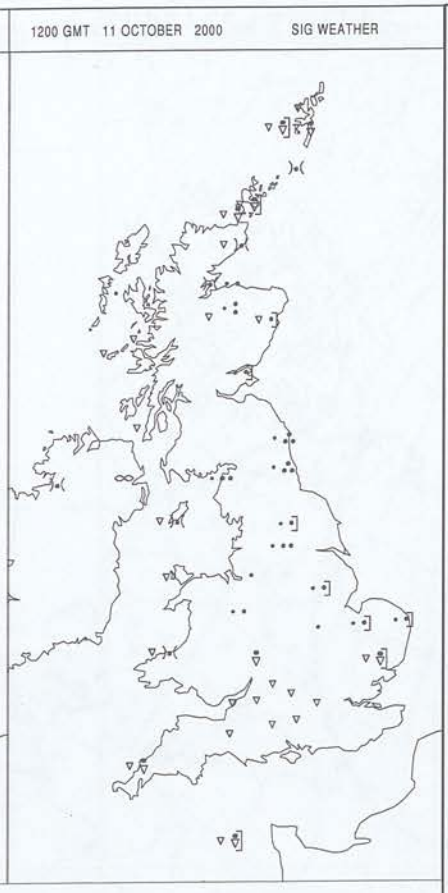
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 11 October 2000.

Northern and western parts of Scotland had outbreaks of rain overnight before it turned drier towards morning. Other parts of Scotland had a generally fine night, though patchy fog was reported for a time from the Glasgow area.. During the day, northern and western regions of Scotland had showers or longer outbreaks of rain with the heaviest rain in the northeast and the best of the brightness in the Western Isles. Meanwhile, the Central Lowlands had a few showers, while Southern Scotland found rain arriving from the south and becoming fairly persistent.

In Northern Ireland, there were scattered showers overnight followed by a rather cloudy day with some sunshine along with occasional showers.

Northern England was dry overnight, but outbreaks of rain arrived during the day and proved persistent in parts of the northwest. Otherwise, most other parts of England and Wales started with showers or longer outbreaks of rain. During the day, sunshine was mixed with showers which developed widely, especially across parts of Wales, the Southwest and later on over Southern coastal counties and much of the Southeast England and parts of East Anglia.

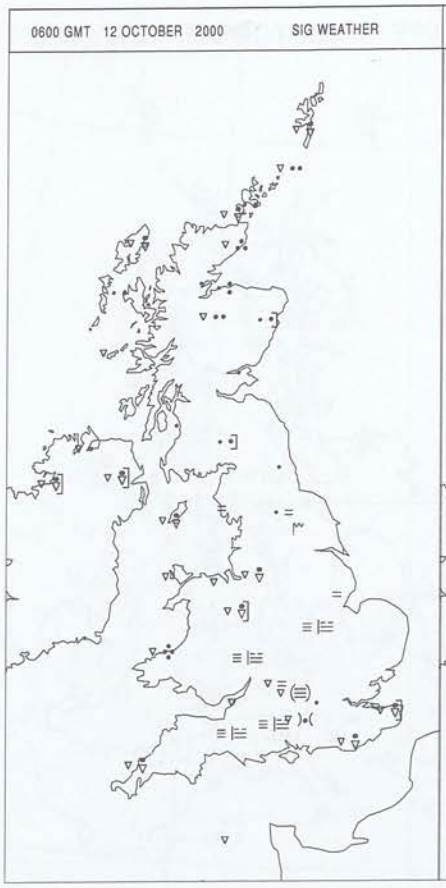
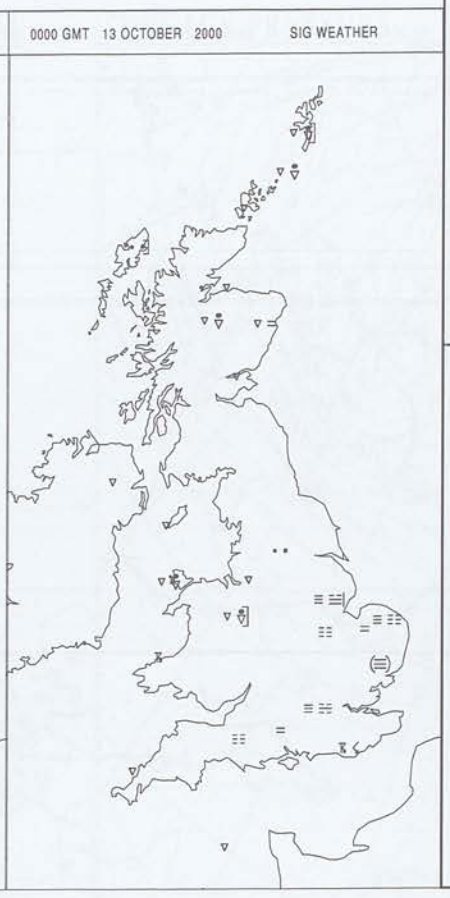
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 12 October 2000.

Central and Northern Scotland had a wet finish to the night with heavy rain in places, but the day itself became drier to leave just isolated showers, though still with a lot of cloud. Otherwise, the rest of Scotland had a mostly dry start. During the day, it was mostly rather cloudy with some showery rain around. However in the Western Isles, despite a strong northerly wind, it was much brighter than elsewhere with no more than a few showers.

In Northern Ireland, there were scattered showers in the hours leading up to dawn before daylight brought a breezy day with sunny intervals and a few mostly light showers.

For the far southeast of England, it was another very eventful time with frequent heavy showers bringing prolonged downpours to some counties bordering the Channel. Sussex and Kent were particularly badly affected with Plumpton recording 5.66 inches in a 24 hour period.

Elsewhere across England and Wales, the overnight period produced a few showers with these mainly over Wales and parts of Southern England. The pre-dawn period also brought patchy fog to parts of the Midlands and East Anglia. During the day, parts of the Southeast, including Suffolk and Essex had heavy rain for a time in the morning, but otherwise sunny intervals developed widely with scattered showers dotted around before these tended to clear away later.

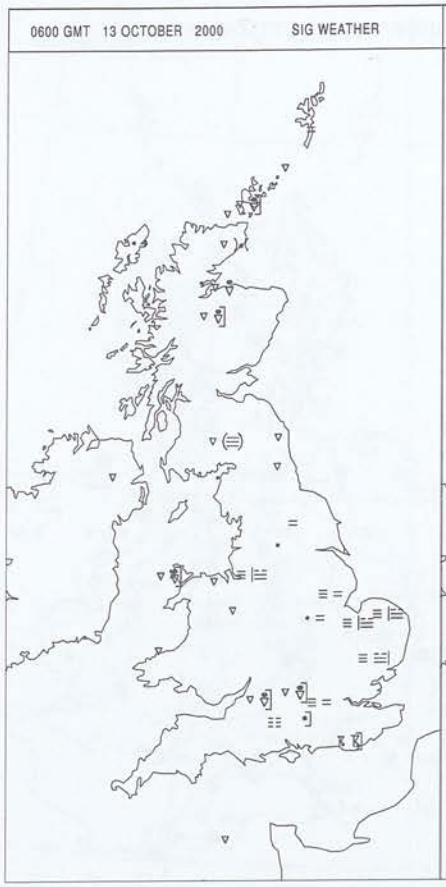
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 13 October 2000.

During the early hours scattered thundery showers cleared quickly from the southeast of England, whilst showers continued to affect northern parts of Scotland, Wales and western parts of England. Some of the showers were heavy, but became lighter and more scattered towards dawn, with the odd shower over Northern Ireland. Elsewhere it was mainly dry with clear spells, allowing mist and fog to form, and with temperatures falling low enough for a touch of frost on the grass.

During the daytime showers continued to die away, so that the there was a lot of dry and bright weather about after the clearance of morning fog. Cloudier skies however returned to Northern Ireland and Western Scotland during the afternoon bringing outbreaks of rain.

Through the evening the rain spread further east across Scotland, into Wales and NW England. Elsewhere continued dry with clear spells, turning misty with isolated fog patches over Southern England.

Fresh to strong northwesterly winds affected western areas at first, then as southwesterlies again later. Temperatures were near average, but locally rather warm in the south.

EXTREMES

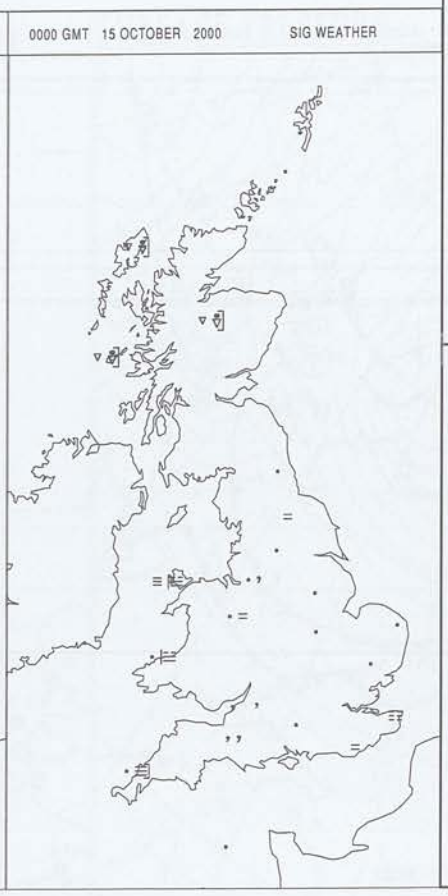
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 14 October 2000.

Eastern parts of England had some clear spells overnight but rain extended into western and northern parts as well as Wales. Much of Scotland had a cloudy night and there were some outbreaks of rain, while across Northern Ireland early rain petered out.

Northern Ireland had a generally dry, bright day, with just scattered showers in the north. Scotland was also mostly dry for much of the day, apart from some showers in the west. The showers became heavier and more organised in the west in the evening. Eastern Scotland had plenty of sunshine. Much of England and Wales had a cloudy day. There was some mainly light rain and drizzle in western parts and this edged east by afternoon. A fairly narrow band of rain from the Channel Islands to Sussex into East Anglia, developed by midday and persisted for several hours, although rainfall totals were not large. This rain band narrowed and then petered out by mid-evening.

Temperatures were close to average in many places. Northern Ireland was rather warm and southeast England and East Anglia rather cold.

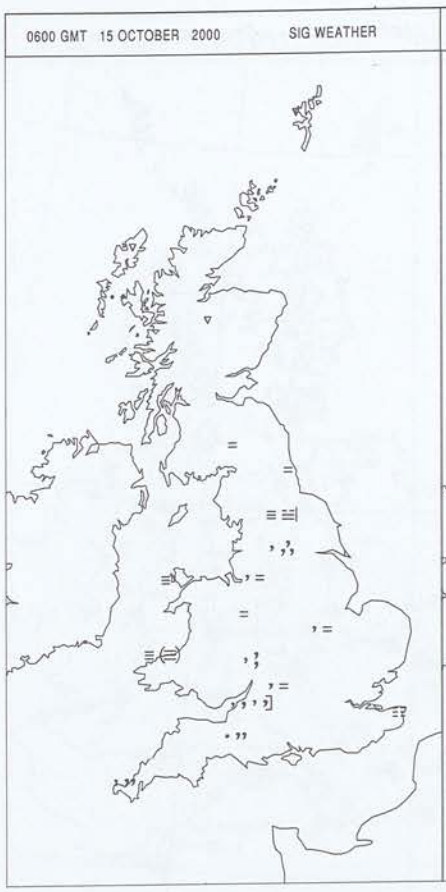
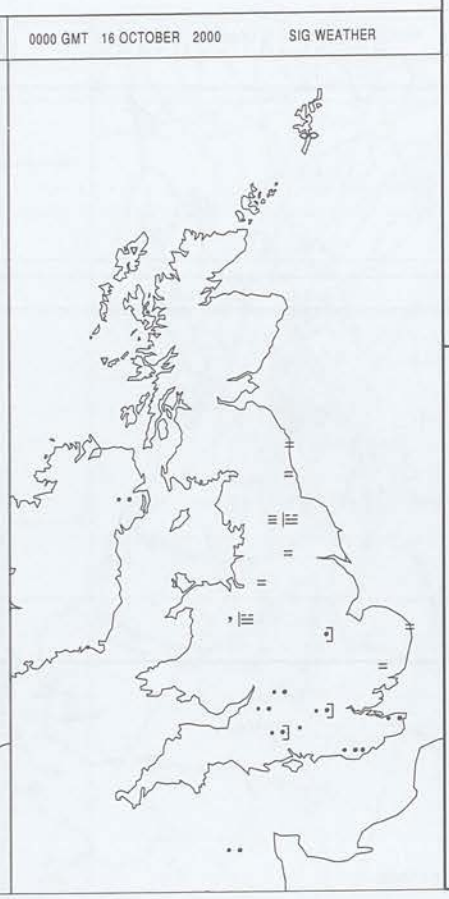
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 15 October 2000.

Northern Ireland had a dry night as did much of Scotland, but there were some showers in the west. Much of England stayed cloudy but there were some clear periods over southeast England, and a few patches of fog. There was a little drizzle here and there further west. Fog formed in west Wales while the east was cloudy.

Northern Ireland had a largely sunny day but cloud increased later and there was some rain in the evening. There were a few showers across the Western Isles and then more general rain in the evening across western Scotland. Most of Scotland though had a dry day and southern and eastern parts were sunny. The fog soon cleared in the morning. Much of Wales had a sunny day, as did Cumbria and parts of northwest England. Most of England had at least some sunshine, after a cloudy start with some drizzle in the west at first. The far southwest stayed cloudy. Rain reached the southeast by late evening.

Temperatures were mostly close to average. Northern Ireland western Scotland were rather warm.

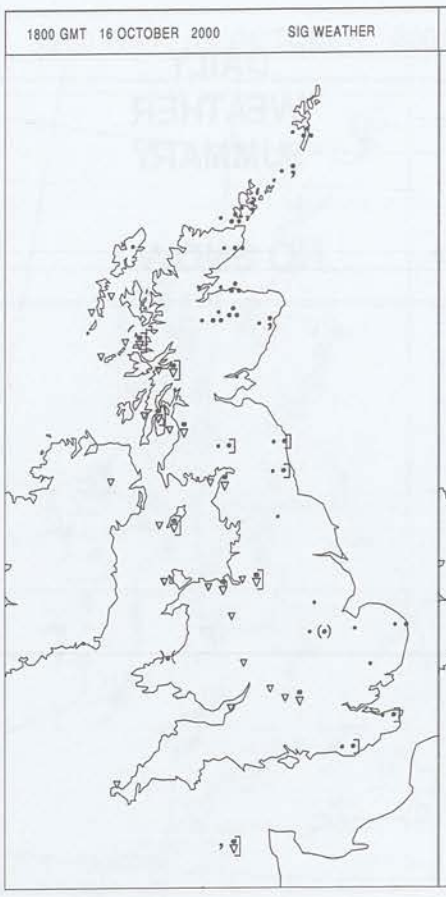
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 16 October 2000.

Overnight, rain affected much of western Scotland, Northern Ireland, southeast England, East Midlands and East Anglia. The rain was heavy in places and began to affect northeast England towards daybreak. Remaining areas had a dry night.

There was further rain for western Scotland and eastern parts of Northern Ireland during the morning. The rain cleared Northern Ireland towards midday, but was replaced by frequent showers for the afternoon. The rain across western Scotland edged eastwards to affect northeast Scotland in the afternoon and evening.

Many eastern counties of England had a wet start to the day with heavy rain in places. East Anglia and the far southeast of England became drier for a time in the morning but there was further rain in the afternoon. The rain eventually cleared the eastern counties late in the day.

Remaining areas had a largely dry and bright day, although showers did develop across parts of Wales, northwest England and also the Midlands in the afternoon, but these largely died away during the evening.

The temperatures were generally close to normal, but a little below over eastern England.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 17 October 2000.

The overnight period saw a good deal of dry and fairly clear, but chilly weather across the British Isles, under the influence of a ridge of high pressure, although the odd light showery outbreak of rain did affect the north and west extremities of Scotland, and a few misty patches formed where cloud remained most broken.

Through the morning, most places held onto dry and fairly clear weather with plenty of sunshine being reported, the best of this in eastern parts of the British Isles. Meanwhile across Northern Ireland and western parts of both Scotland and Wales, increasing cloud and wind brought some showery bursts of rain, the most widespread of which developed across Northern Ireland.

During the afternoon and into the evening, outbreaks of rain, some of which were heavy and accompanied by local gales, edged further east into all parts of Scotland, Wales, and across northern and western parts of England. Central England saw some showery bursts late on, but much of southeastern England remained dry, albeit turning increasingly cloudy.

Temperatures were generally close to the seasonal norm.

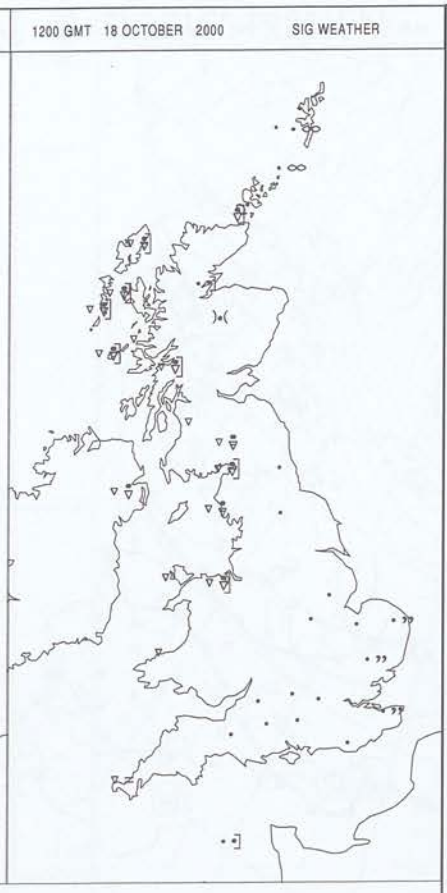
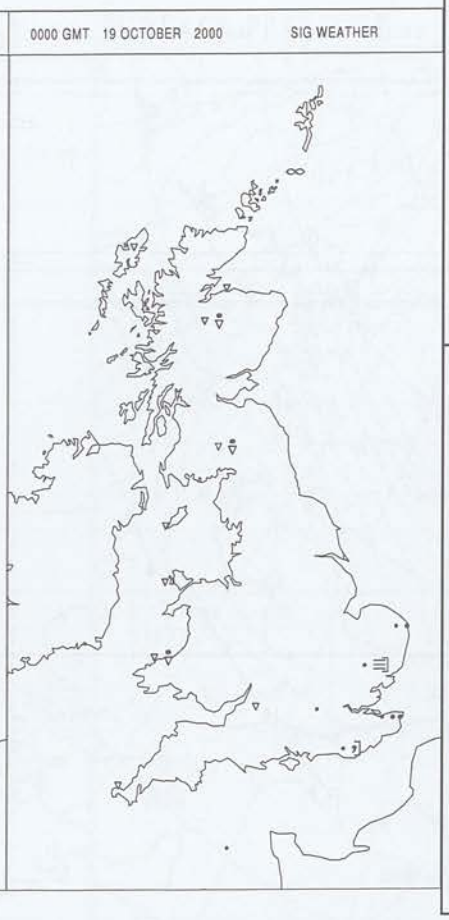
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 18 October 2000.

Northern Ireland saw a mainly dry night with clearing skies. After a wet start across Central and Eastern Scotland, clearer weather already into the west extended to all parts, accompanied by coastal showers in the west. It was windy in the Northern Isles. Meanwhile, after a mostly dry start to the night across Eastern England, thickening cloud and strengthening winds spread locally moderate to heavy showery rain from the west across both England and Wales, which cleared towards the east coast by morning.

Central, Southern and Eastern England held onto a lot of cloud through the day, with further showery bursts of rain, notably across the southeast. For Scotland, Northern Ireland and parts of Wales and Northern England, there was a mix of sunshine and showers, the showers heaviest and most frequent, with local thunder and blustery winds, near west facing coasts.

Extensive cloud cover continued to shroud Central and Southern England, and much of Wales into the evening, with further showery rain in the southeast, whilst clear spells and showers were noted elsewhere.

Temperatures were normal to rather warm.

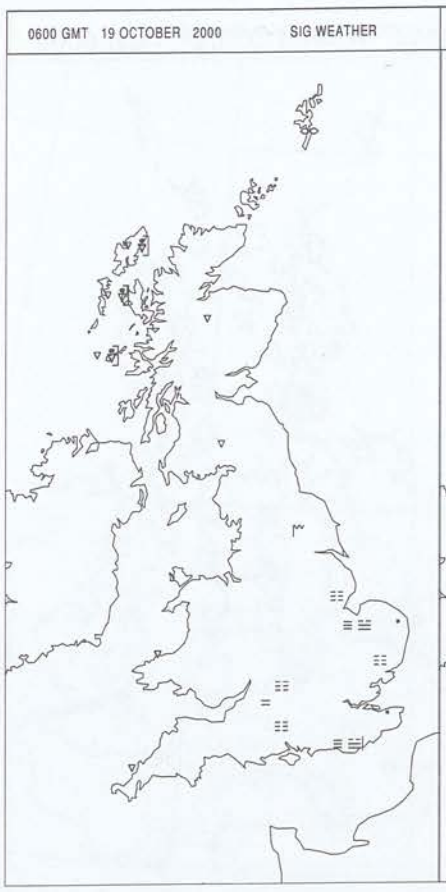
SIGNIFICANT WEATHER



Summary of UK Weather for Thursday 19 October 2000.

Northern Ireland was mostly fine before dawn, though northernmost parts had scattered showers. During the day, there were mostly sunny skies, apart from showers in northernmost areas, though even these disappeared later to leave everywhere with a fine evening.

Across Scotland, the rest of the night was mainly fine, but a few showers were around in Highland region with rather more in the Western Isles later.

During the day, many places in the north and northwest became rather cloudy at times with mostly light showery rain. Elsewhere, it was dry with plenty of sunshine with the evening remaining fine.

Wales and Northwest England had showers in the latter part of the night, while in the rest of England, Kent and Sussex had early rain. Otherwise the night stayed largely fine.

By day, England and Wales was mostly sunny, apart from parts of Northwest England and Wales having showers, before these became restricted to coastal areas. After dark, it stayed fine.

Daytime temperatures were close to normal over Scotland and Northern Ireland, but England and Wales was warmer than average.

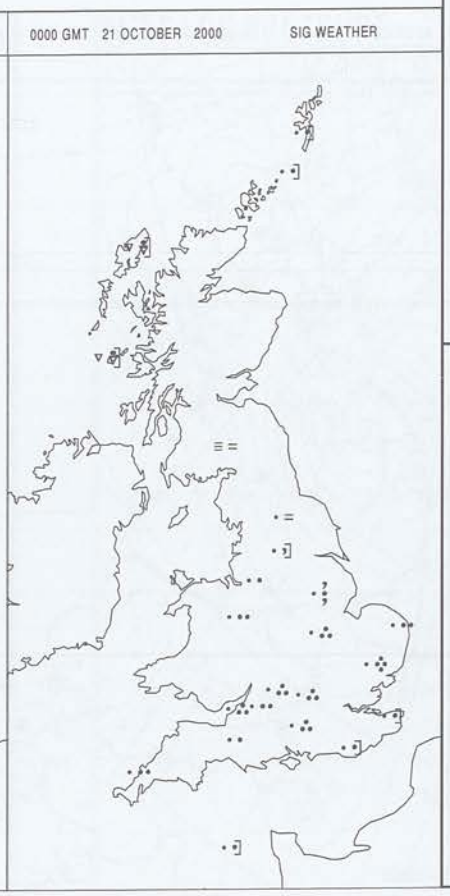
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 20 October 2000.

Across Northern Ireland and Southwest Scotland, increasing southeasterly winds brought rain by the end of the night, while the rest of Scotland stayed fine.

These outbreaks of rain moved on across the rest of Scotland in the morning, reaching the far northeast in the afternoon.

Brighter showery weather soon followed during the morning to Northern Ireland and Southwest Scotland before extending northeastwards to most other parts of Scotland, though Shetland stayed wet.

Over Central and Southern Scotland, winds did not increase too much, but elsewhere, many places had strong to gale force winds for a time with Machrihanish recording a gust of 52 knots around 0700 local time.

Over England and Wales, outbreaks of rain and strengthening winds arrived by dawn over much of Southwest England, the West Midlands and Wales. Most other parts of England stayed dry through until daybreak, but patchy mist formed in places.

During the day, any early brightness soon disappeared. Otherwise, patchy and mostly light rain lasted into the afternoon.

Channel Islands and the far Southeast of England turned very wet by late afternoon with lengthy outbreaks of often heavy rain moving northwards through the evening to all except northernmost counties of England.

EXTREMES

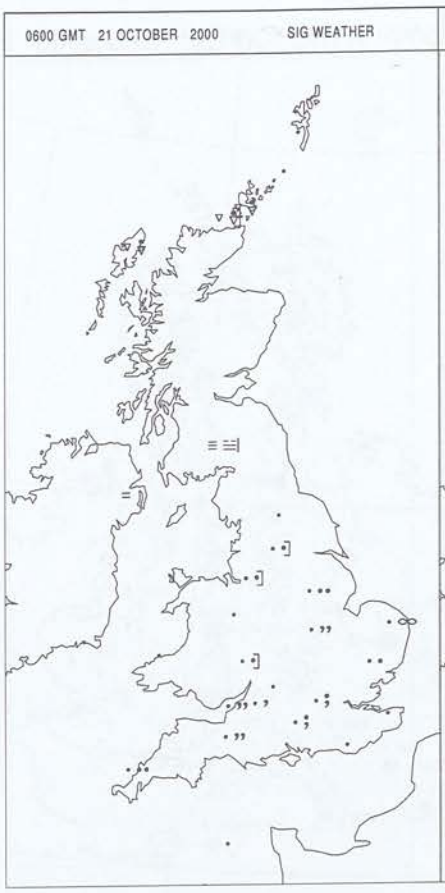
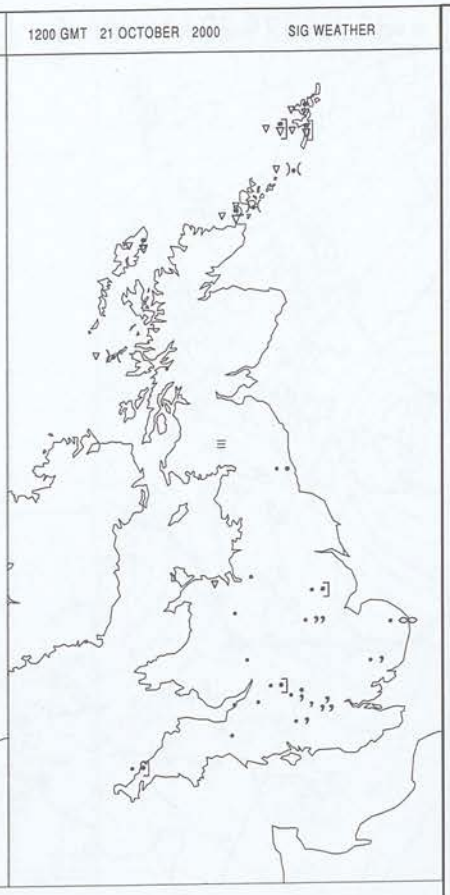
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 21 October 2000.

Rain, some of which was heavy, affected southern England, East Anglia, the Midlands and Wales during the first part of the night. The rain edged northwards during the rest of the night to affect all but northernmost counties of England. The rain became lighter as it edged northwards, and left rather murky and damp conditions across the South. Scotland and Northern Ireland had a largely dry night although there was a scattering of showers over western Scotland.

Much of England had an overcast day with further outbreaks of chiefly light rain and drizzle at times, although some brighter intervals did develop briefly over eastern parts of East Anglia and Kent. Westernmost parts of England, and much of Wales, became brighter, especially during the afternoon. Scotland and Northern Ireland remained largely dry with sunny spells, although there were further showers over western parts of Scotland.

During the evening, there were still a few pockets of light drizzle over southeast England, but remaining areas were dry with broken cloud.

The temperatures were generally near, or a little below normal, although eastern parts of East Anglia and southeast England were rather warm.

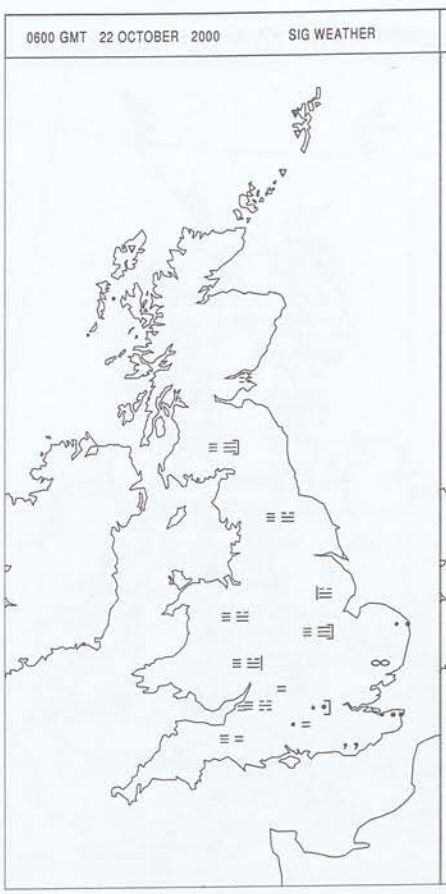
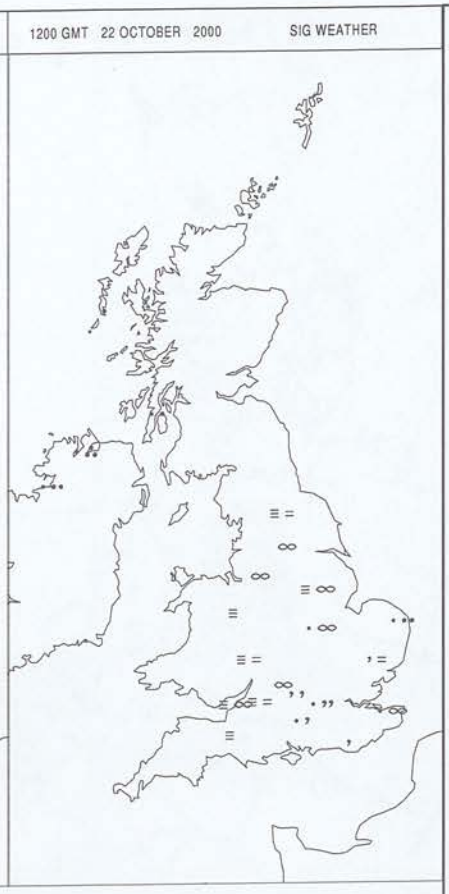
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 22 October 2000.

East Anglia, central southern and southeast England had a cloudy night with outbreaks of mostly light rain and drizzle. Remaining areas were dry with well broken cloud. Mist and fog formed under the clearer skies. Later in the night, Northern Ireland and westernmost parts of Scotland became cloudier.

The increasing cloud across Northern Ireland brought rain during the latter part of the morning and through the afternoon.

Scotland had a largely dry day but with increasing cloud. The best of the brightness was in the east. Rain edged into western parts during the late afternoon period, and then across eastern areas during the evening.

There was further rain and drizzle across East Anglia and southeast England during the morning, but much of the afternoon was dry with thinning cloud.

Wales and the rest of England, after a foggy start in a number of places, had a bright day with sunny spells. However, increasing cloud in the west brought rain to western areas during the latter part of the day.

There was an overnight frost in some northern and western parts. The temperatures during the day were generally close to normal but were a little above over southern counties of England.

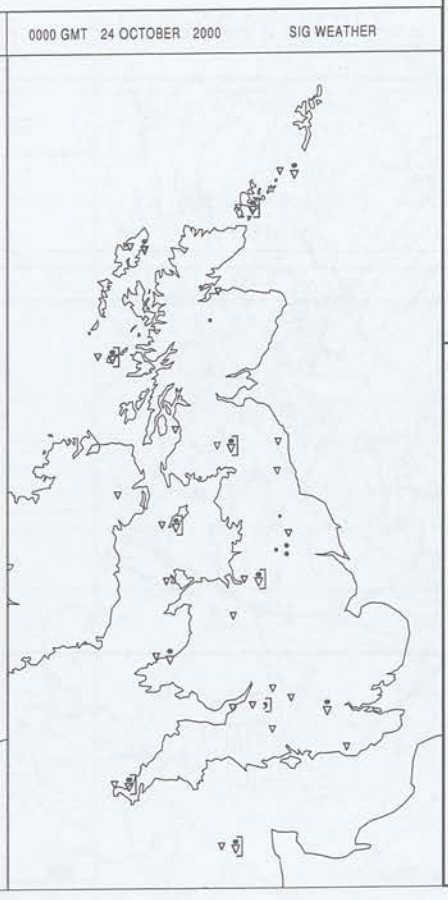
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 23 October 2000.

Apart from a little rain in the extreme southeast, much of central and eastern England started dry with clear spells. Some fog formed in East Anglia. Showery rain affected Scotland, Northern Ireland and the western half of England and this pushed east, weakening, into remaining areas by the end of the night.

The day was essentially a showery one with showers developing in all areas at times but the most frequent and heaviest were to be found in Western Scotland, Northern Ireland, Northwest England, Wales and the Southwest. Showers further east were much more scattered though an organised band crossed the Southeast in the early afternoon. By evening showers were confined to the southern coastal areas and along western coasts and hills, just a few penetrating to the east of the Pennines.

It was a windy day, the winds mainly south to southwesterly, veering northwesterly in Northern Ireland and Western Scotland. Several gusts of 45 kt were recorded at western coastal stations.

Temperatures were generally rather warm to warm in the southeast of England and normal to rather warm elsewhere.

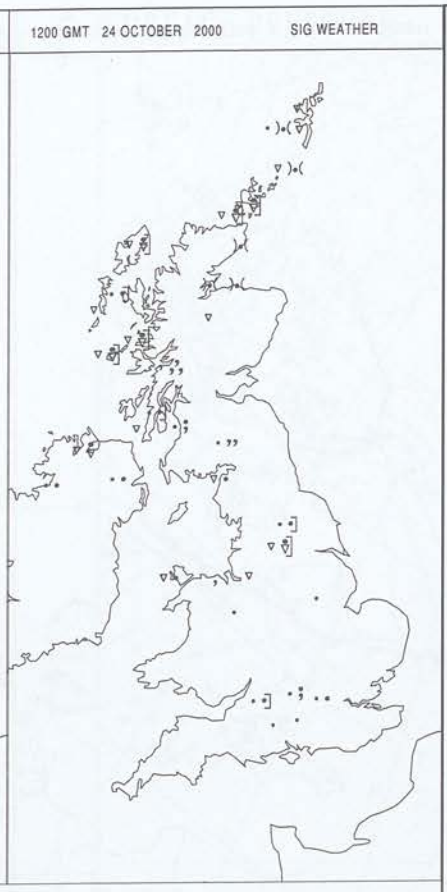
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 24 October 2000.

The night was largely dry with clear spells in most central and eastern parts whilst areas exposed to the west saw showers, some heavy, last throughout the night. By the end of the night high clouds were spreading over the top of the showers into the west.

The morning started dry and bright in the east but high clouds rapidly spread from the west and thickened, so much of the day was cloudy. Outbreaks of rain spread into Northern Ireland and west Wales by the end of the morning, pushing eastwards reaching the Midlands and southwest Scotland by mid afternoon. The south and southwest of England only saw a little rain or drizzle. By early evening the rain, heavy in places, lay across central and western Scotland, Northern Ireland down into the north Midlands and East Anglia with patches over Wales and the southwest.

Winds were fresh to strong southwesterly backing southerly in western areas and increasing through the evening with gusts in the range 50 to 55 kt on exposed western coasts and hills

Maximum temperatures were near normal.

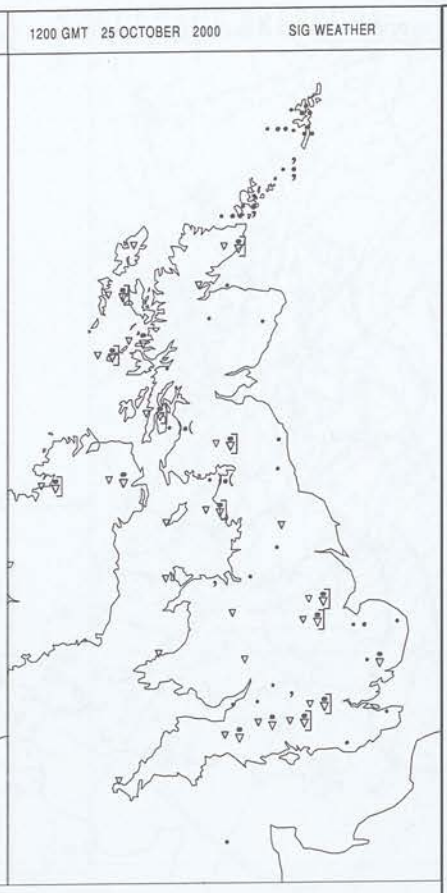
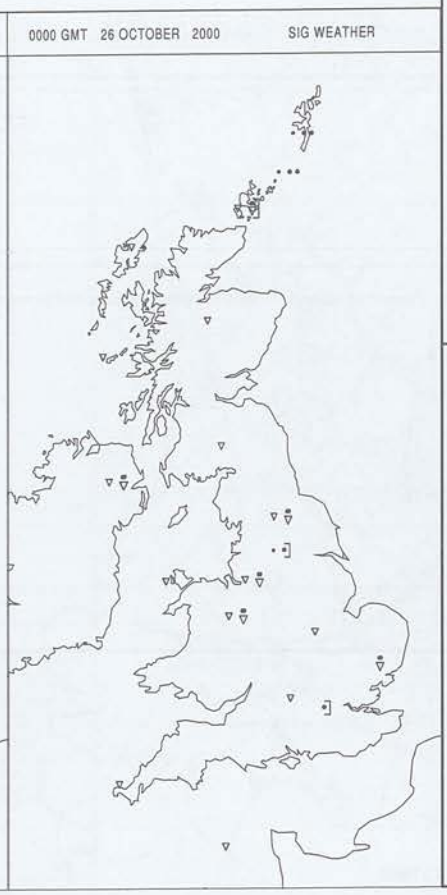
SIGNIFICANT WEATHER





Summary of UK Weather for Wednesday 25 October 2000.

Rain covered Northern Ireland, Scotland, northern England and Wales at first, this was heavy in places, especially on western upslopes. The rain became lighter as it sped southeast across southern England; showers followed to Wales. The rain further north had largely cleared into the North Sea by dawn.

During the morning showers peppered the Northwest Highlands, southwest England and Lancashire, some progressing further east as well.

Frequent showers continued during the afternoon across western Scotland and Northern Ireland, while in other parts they were well scattered.

The evening saw the showers persist in western Scotland, Northern Ireland, much of Wales, the northwest coast of southwest England and Lancashire and Cumbria; elsewhere it was mostly dry.

It was a generally windy day, especially early on when gale force southwesterly winds affected the coast along the Irish Sea, St George's Channel the Bristol Channel and exposed high ground in northwest England.

Temperatures were around normal across most of Britain, though parts of the southeast were rather warm.

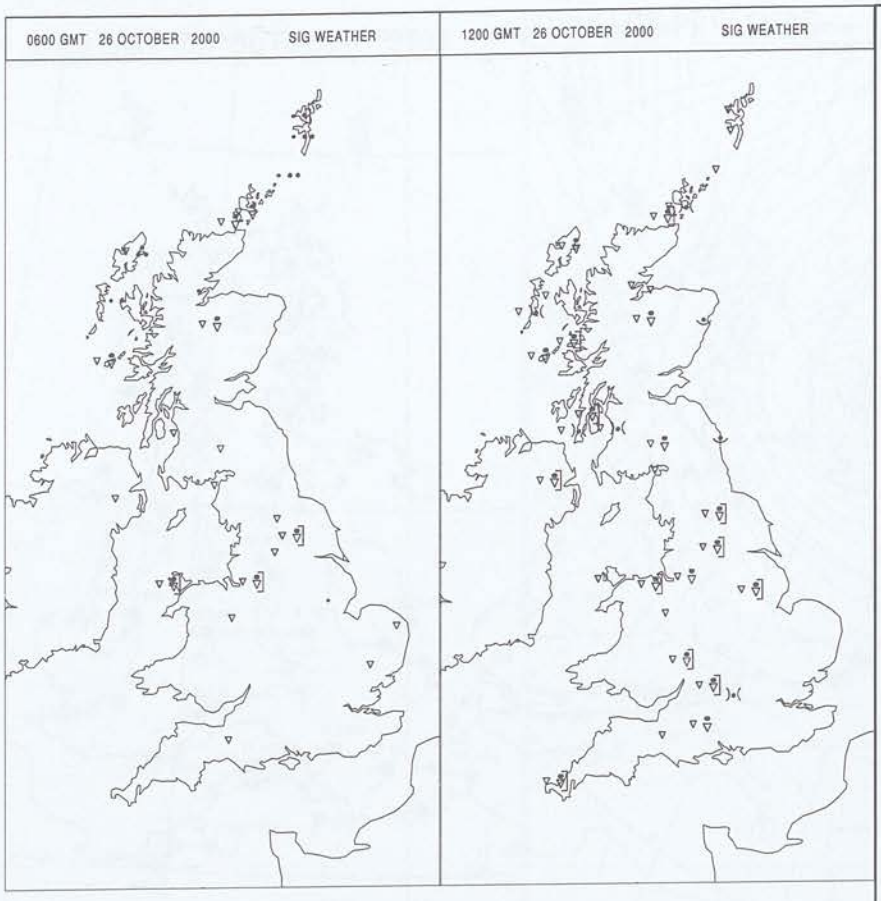
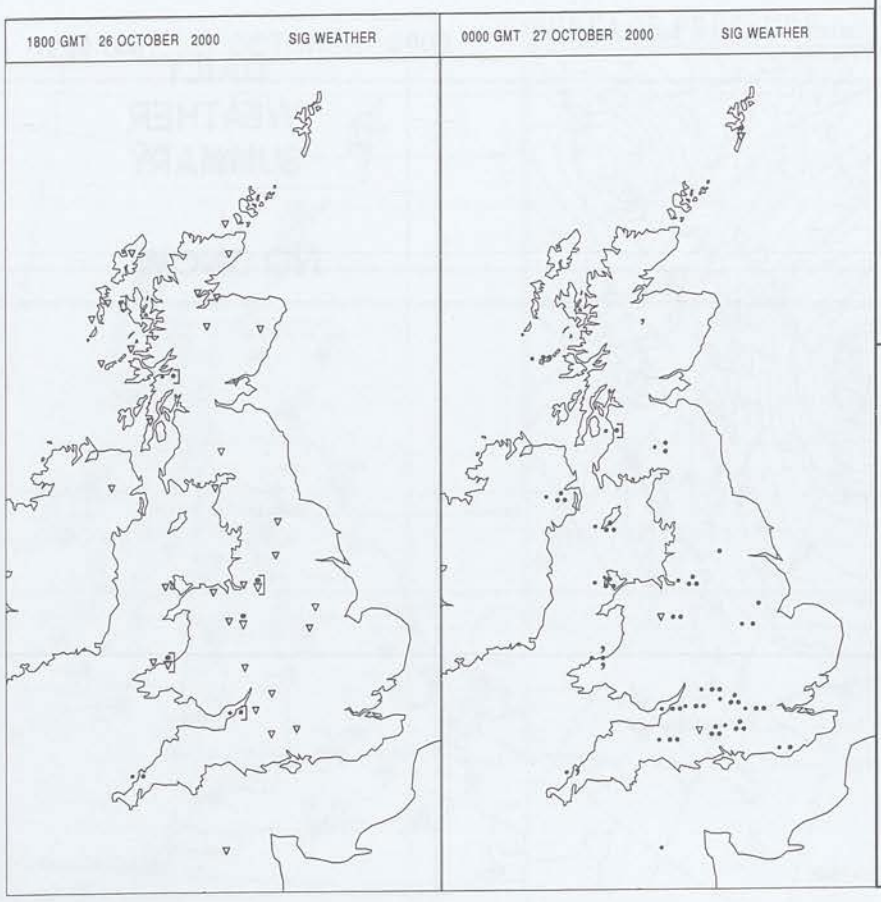
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 26 October 2000.

Showers peppered the west coast of Scotland, northern Northern Ireland, north Wales, northwest England and Cornwall through the early hours. Outbreaks of heavy showery rain persisted over northwest Scotland, the heaviest rain largely across the western slopes of the Northwest Highlands.

During the morning the showers continued, one or two stretching east, however, the northwest of Scotland saw the heavy rain gradually peter away to scattered showers.

In the afternoon showers become widely spaced and light, some reaching across to eastern England, while in Scotland and Northern Ireland they had largely died out by mid-afternoon. Rain arrived into the southwest of Northern Ireland around dusk, then into southwest Wales and Cornwall soon after. This area of rain moved northeast through the evening, at it's lightest in the south, heavy bursts were reported in Wales, Northern Ireland and southwest Scotland. By midnight the leading edge had reached a line from the Isle of Skye Eastbourne, while drier weather had arrived into Cornwall and Northern Ireland.

Temperatures were around normal almost everywhere.

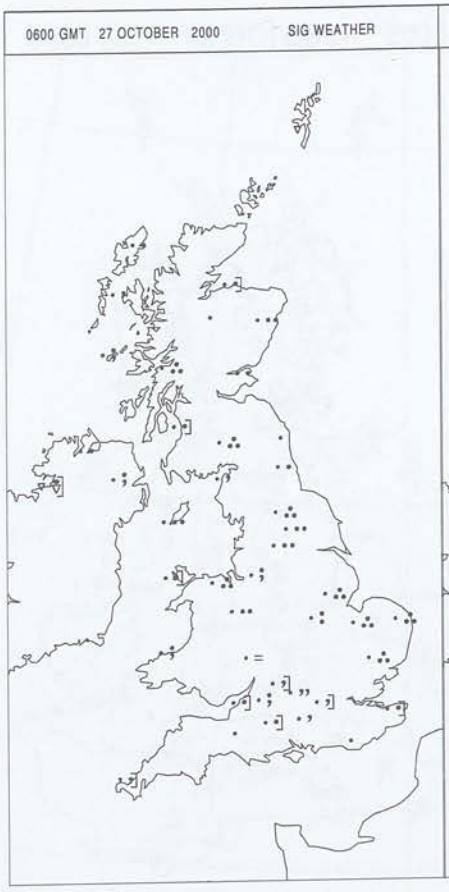
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 27 October 2000.

Much of Northern Ireland had a rainy end to Thursday night. In Scotland, the end of the night brought rain to parts of the west while most other regions stayed fine.

During the day, Northern Ireland soon brightened and stayed mostly dry with the fine weather continuing after dark.

For Scotland, Orkney and Shetland started bright, but otherwise rain or drizzle reached most places during the morning with brighter skies following across the mainland. Showers followed to the west and north with hail in the Western Isles in the evening, while other regions stayed fine.

Some eastern counties of England stayed dry before dawn, but elsewhere in England and Wales, there was rain.

By day, there was rain or drizzle at times until brighter weather reached West Wales and parts of Northwest England and moved on to Northeast England and the Midlands.

Elsewhere, rain became more patchy, but it stayed mostly cloudy.

It was generally rather windy with parts of South Wales reporting gusts to 50 knots around dawn.

Temperatures were mostly a little above normal, especially in the south.

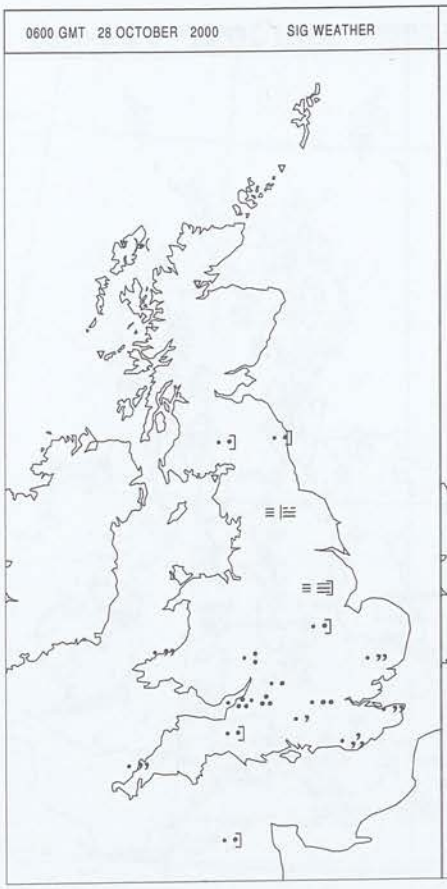
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 28 October 2000.

In Northern Ireland, the remainder of the night stayed dry.

The day soon brought windy weather with outbreaks of heavy rain lasting into the evening. Portrush in Antrim reported a gust to 66 knots at 2200 local time.

Much of Scotland stayed dry before dawn.

Then, wind and outbreaks of rain arrived from the south and it became windy with the northeast having severe gales in the evening.

In Wales, the latter part of the night turned wet.

Further outbreaks of heavy rain continued until brighter showery weather followed with some showers lasting into the evening. It was gusty, especially during the afternoon and evening.

In England, some southern counties had rain before dawn, but elsewhere it started dry.

During the morning, outbreaks of heavy rain and strong winds reached all areas before clearer showery weather followed, though not to eastern counties until evening. Some of the showers were heavy with thunder reported from near the Bristol Channel in the evening, while Bognor Regis experienced a tornado.

Temperatures were near normal in Scotland, but otherwise rather warm.

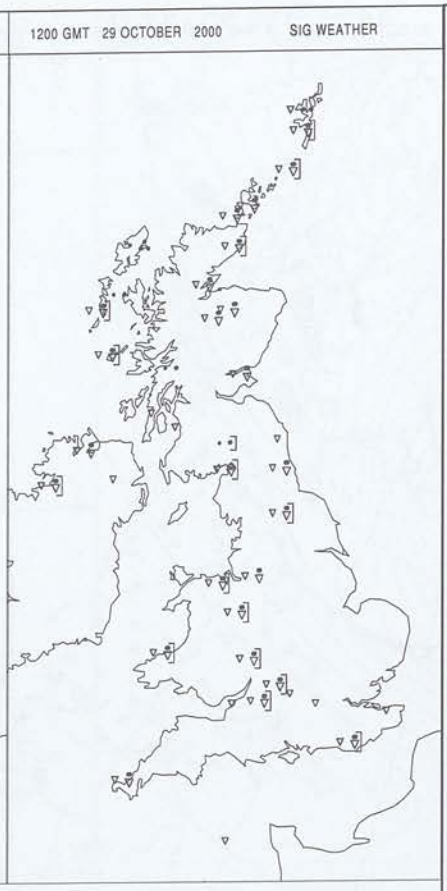
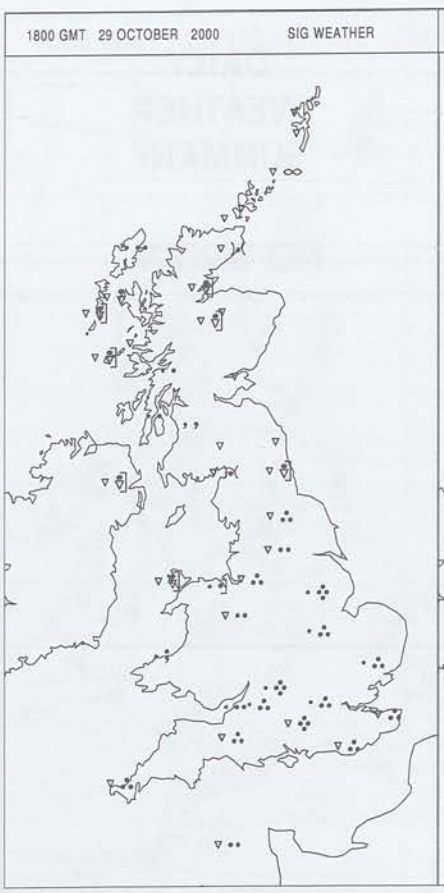
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 29 October 2000.

It was a showery night in all western areas and along English Channel coasts with more persistent rain over southwest Scotland. Thunder was reported on the South Coast.

The day dawned sunny in eastern areas whilst showers persisted along the south and west coasts. Rain lingered in NW Scotland. By midday rain had replaced the showers across Wales and this area of rain pushed rapidly east to the east coast by dusk. The rain was heavy at times but turned more showery in the evening, but by late evening more heavy rain returned from the west into South Wales. Eastern Scotland was mainly dry and bright.

Winds were a feature mainly from the south or southwest. There were frequent gusts of 40-50 kt, strongest at first in Western Scotland but later in the day gales spread across the south of England with gusts at Langdon Bay reaching 67kt in the evening. There were reports of damage and trees down to the south of London.

Temperatures were generally near normal but it was rather cold in Northern Ireland and Southern Scotland.

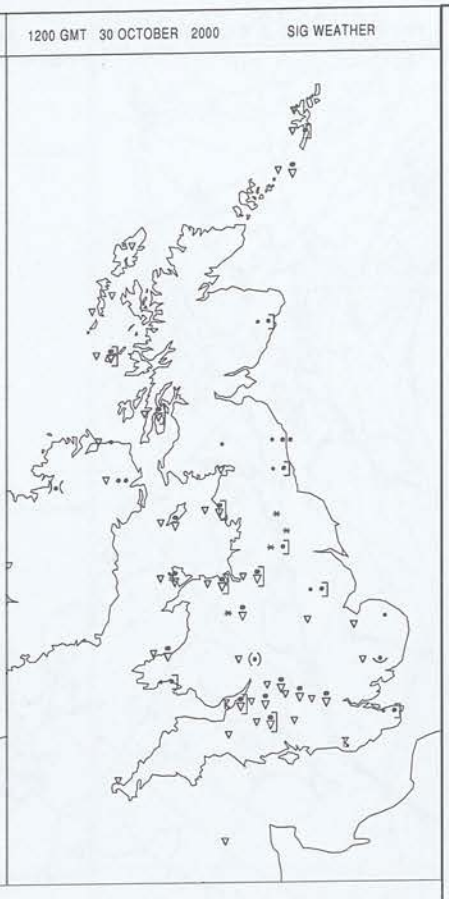
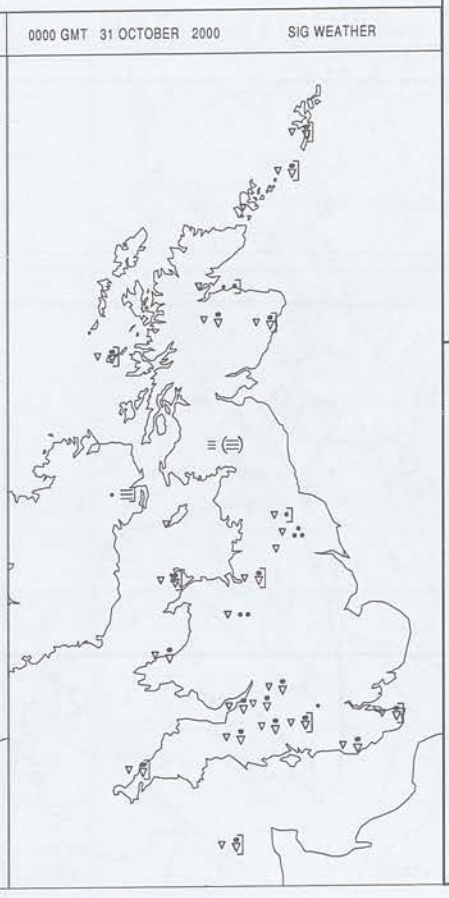
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 30 October 2000.

The southern half of Britain began with widespread gales and outbreaks of continuous and heavy rain. Most other parts of the country were dry with clear periods but during the early hours heavy rain spread across Wales and into the Midlands with winds increasing to severe gale, and storm force around south facing coasts.

The centre was located over North Wales at 0500 with very strong winds in a swathe from southwest England and the Midlands to East Anglia. Highest gusts were 97 mph at Mumbles and 92mph at Plymouth. To the north the weather was quite benign, although the rain gradually extended northwards and started turning to snow in some areas of West and north Yorkshire and across the Peak District to Shropshire.

By midday the wet and very windy weather had cleared away into the North Sea with the winds moderating but bringing some blustery showers around western and southern coasts. These showers subsequently extended eastwards to affect many other places.

Temperatures were average around western and southern coasts but in some inland areas were cool or even locally very cool, this exacerbated by the strong winds.

EXTREMES

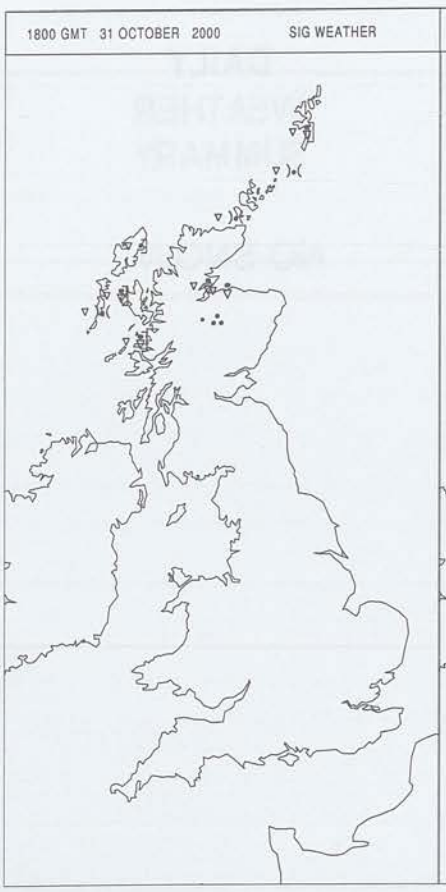
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 31 October 2000.

During the early hours an area of showery rain across Wales and Southwest England moved southeast but degenerated as it came across central and eastern parts of England towards dawn. There were some localised fog patches across parts of northern England, Northern Ireland and Southern Scotland, and also some local frost, whilst across the far north there were a scattering of showers.

Showers in central and eastern England continued to die away during the morning with those in the north and west of Scotland spreading down into Northern Ireland and northwest England. Eastern Scotland and much of northeast England had a dry morning but showers starting crossing the high ground to some of these parts during the afternoon. Some showers were heavy and prolonged and were also comprised of hail at times.

In many parts of the south and west the winds were blustery but were only strong in exposed areas.

Temperatures ranged from slightly below average in parts of the north to slightly above average in sheltered parts of the south.

EXTREMES
